Preface

The \$PEQUV-File is based on the Cross-National Equivalent File (CNEF) with extended income information for the SOEP. This file comprises not only the aggregated income figures provided in the CNEF but also further single income components.

The CNEF is a joint effort of researchers and staff affiliated with Cornell University, the DIW Berlin, the University of Essex, Statistics Canada and the Melbourne Institute of Applied Economics and Social Research funded by the National Institute on Aging and by the DIW Berlin. For extensive documentation of the CNEF cf. <http://www.human.cornell.edu/pam/SOEP/equivfil.cfm> or:

Joachim R. Frick, Stephen P. Jenkins, Dean R. Lillard, Oliver Lipps, and Mark Wooden (2007):
The Cross-National Equivalent File (CNEF) and its Member Country Household Panel Studies.
In: Schmollers Jahrbuch (Journal of Applied Social Science Studies), Vol. 127(4) , p. 627-654.

General notes:

- In contrast to the original CNEF-data which is based on the 95% scientific use file of SOEP, the \$PEQUIV-files include the full 100%-sample.
- The 2008 release of the \$PEQUIV-files has been updated to include the 2007 (wave X) SOEP data..
- Population for \$PEQUIV is made up by all members of households who were successfully interviewed (i.e., persons with \$NETTO-codes 10 to 39 in the file PPFAD and \$HNETTO-code 1 in the file HPFAD).
- For longitudinal consistency, all \$PEQUIV income variables are consistently expressed in EURO (1 Euro = 1,95583 DM) independent of the currency used in the underlying survey instruments.
- Income data is missing for Sample C in 1990 and 1991 (first 2 waves of East German sample).
- Information for the SOEP sub-sample G (“High Income”) has been incorporated for the survey years 2002-2007. However, the standard weighting scheme (i.e., variables w11101\$\$ and w11102\$\$) for these waves are based on SOEP sub-samples A-F only in order to maintain a harmonized time-series. If you are interested in using all sub-samples of the SOEP including the high income sample G you should use the alternative weighting variable w11105\$.

An important distinction from the original CNEF data, is that the \$PEQUIV-files have been extended to also cover all single income components considered in the aggregated annual income figures of the CNEF. In principle, these single income components correspond to the originally surveyed information (which is stored in the \$P, \$PKAL and \$H files, respectively) with some important amendments:

- Income variables are harmonized with respect to the periodicity, i.e. they give annual income (as of the previous calendar year). Components which are asked at monthly level have been multiplied by the number of months with receipt of the respective income (eventually, this implies imputation of missing number of months in the originally surveyed data as well as a longitudinally verified correction of implausible values).
- Any missing income information due to item-non response has been imputed according to the longitudinal and cross-sectional imputation procedures described in: Grabka, M.M. and Frick, J.R. (2003): Imputation of Item-Non-Response on Income Questions in the SOEP 1984–2002. DIW Research Note No. 29, Berlin October 2003.
(http://www.diw.de/deutsch/produkte/publikationen/materialien/docs/papers/diw_rn03-10-29.pdf).
See also: Frick, J.R. and Grabka, M.M. (2005): Item-Non-Response on Income Questions in Panel surveys: Incidence, Imputation and the Impact on the Income Distribution. Allgemeines Statistisches Archiv (AStA) 89, 49-61.
- An imputation flag for each of these single income components has been specified. These flags take a value of 1 if item-non-response on the underlying income variable has been imputed and 0 otherwise.

General variable naming conventions for the \$PEQUIV-variables: (see variable list on page 4):

- Variable names are longitudinally consistent using a two-digit suffix indicating the survey year (wave A = 84, wave B = 85, ..., wave X = 07, \$\$ = 84, 85, ..., 07).

Variable naming conventions for the single income components:

- Variable names related to income components at the individual level start with the prefix “T”, e.g., Christmas bonus is given in variable IXMAS\$\$.
- The prefix “F” indicates the imputation flag, e.g. the flag variable for rental income (RENTY\$\$) is given by FRENTY\$.

For further information please contact: Markus M. Grabka (mgrabka@diw.de).

Variables in the cross-sectional \$PEQUIV Files 1984-2007

Label	Variable List	Page
Identifiers:		
Unique Person Number	X11101LL	10
Household Identification Number	X11102\$\$	11
Individual in Household at Survey	X11103\$\$	12

Using the \$PEQUIV File Codebook

Variable Name	I11110\$\$	<i>Name of Variable in the \$PEQUIV-File</i>
Variable Label	Labor Earnings of Individual	
Unit of Observation	Individual / Household / Year	
Period	Annual	<i>Periodicity</i>
		<i>Description of Variable Content</i>
Description	This variable represents the labor earnings of each individual in the household.	
Method		<i>Description of Variable Creation</i>
	Labor earnings include wages and salary from all employment including training, primary and secondary jobs, and self-employment, plus income from bonuses, overtime, and profit-sharing.	
	Specifically labor earnings is the sum of income from primary job, secondary job, self-employment, 13th month pay, 14th month pay, Christmas bonus pay, holiday bonus pay, miscellaneous bonus pay, and profit-sharing income.	
Format		<i>Variable Format in the \$PEQUIV-File</i>
	Not formatted. This variable is in current year EURO.	
Algorithm	$I11110\$ = IJOB1\$ + IJOB2\$ + ISELF\$ + IMILT\$ + I13LY\$ + I14LY\$ + IXMAS\$ + IHOLY\$ + IGRAY\$ + IOTHY\$$	

Variable Name	X11101LL
Variable Label	Unique Person Number
Unit of Observation	Individual
Description	This variable provides unique identification for each individual ever surveyed in the SOEP.
Method	Transcribed variable.
Format	N/A
	The original survey variables provided below can be found in the file PPFAD.
Algorithm	X11101LL = PERSNR

Variable Name	X11102\$\$
Variable Label	Household Identification Number
Unit of Observation	Household
Description	This variable links individuals to the households they were living in at the time of the interview. The SOEP provides yearly household identification numbers.
Method	Transcribed variable.
Format	N/A
	The original survey variables provided below can be found in the files HPFAD.
Algorithm	X11102\$\$ = Yhhnr

Variable Name	X11103\$\$
Variable Label	Individual in Household at Survey
Unit of Observation	Individual
Description	Indicates whether an individual was living in the household at the time of the interview regardless of whether the individual responded to interview questions.
Method	Individuals who are members of a surveyed household are given a 1. Individuals who moved out of a SOEP household, died, or went abroad are given a 0.
Format	0 = No 1 = Yes
	The original survey variables provided below can be found in the file HPFAD.
Algorithm	If Ynetto >= 10 & Ynetto < 40 and Yhnetto=1 then X11103\$\$ = 1 else X11103\$\$ = 0

Variable Name	X11104LL
Variable Label	Sub-sample Identifier
Unit of Observation	Individual
Description	This variable indicates from which sub sample an individual in the SOEP drawn.
Method	<p>The SOEP contains seven different samples.</p> <ol style="list-style-type: none"> 1) Sample A consists of the residents of West Germany originally surveyed in 1984. 2) Sample B consists of a sample of foreign guest-workers of Italian, Spanish, Turkish, Yugoslavian, and Greek nationality also surveyed in 1984. The 1,400 foreign households in this original oversample were selected based on the nationality of the head of household. Foreigners who are not Italian, Spanish, Turkish, Yugoslavian, or Greek are included with the Germans in Sample A. 3) Sample C represents population of Germans residing in the former East German states in 1990. 4) Sample D surveyed in 1994/95 represents the population of households with at least household member who immigrated to Germany after 1984. 5) Sample E is a supplemental random sample that represents the population of Germany in 1998. 6) Sample F is an additional supplemental random sample that represents the population of Germany in 2000. 7) Sample G surveyed in 2002 is the so-called "high-income sample". Sampling criteria was a monthly disposable household income of more than 7,500 DM in 2001. Sample G represents about 7,3% individuals in private households with the highest income. 8) Sample H is an additional supplemental random sample that represents the population of Germany in 2006.
Format	<p>21 = Sample A 22 = Sample B 23 = Sample C 24 = Sample D 25 = Sample E 26 = Sample F 27 = Sample G 28 = Sample H</p> <p>The original survey variables provided below can be found in the file PPFAD.</p>
Algorithm	<pre> if psample = 1 then X11104LL = 21 else if psample = 2 then X11104LL = 22 else if psample = 3 then X11104LL = 23 else if psample = 4 then X11104LL = 24 else if psample = 5 then X11104LL = 25 else if psample = 6 then X11104LL = 26 else if psample = 7 then X11104LL = 27 else if psample = 8 then X11104LL = 28 </pre>

Variable Name	X11105\$\$
Variable Label	Indicator of Whether Person in Household was Interviewed
Unit of Observation	Individual
Description	Indicates whether an individual present in the household provided interview responses. Children in the household are counted as interviewed persons.
Method	Individuals in the household 16 years of age and older who are members of a surveyed household reject to give an interview are given a 0.
Format	0 = Didn't provide information 1 = Provided information
	The original survey variables provided below can be found in the file PPFAD. This algorithm omits individuals with survey non-responses.
Algorithm	If Ynetto >= 10 & Ynetto < 30 then X11105\$\$ = 1; else X11105\$\$ = 0;

Variable Name	D11101\$\$
Variable Label	Age of Individual
Unit of Observation	Individual
Description	Indicates the age of the individual in years.
Method	The SOEP records the birth date (GEBJAHR) of each individual. The current age of an individual is created by subtracting the year of birth from the current year.
Format	<p>-1 = Item non-response 0 = Newborn up to first birthday</p> <p>The value of this variable ranges from 0 to 105.</p> <p>The original survey variables provided below can be found in the file PPFAD. This algorithm omits individuals with survey non-responses.</p>
Algorithm	<p>D11101\$\$ = 19\$\$ - GEBJAHR (\$\$=84-99)</p> <p>D11101\$\$ = 20\$\$ - GEBJAHR (\$\$=00-07)</p>

Variable Name	D11102LL
Variable Label	Gender of Individual
Unit of Observation	Individual
Description	Indicates the gender of the individual.
Method	<p>The SOEP records the gender (SEX) of each individual. This information is acquired once and is not obtained in subsequent years.</p> <p>Gender is constant through time and therefore does not have a yearly suffix. This variable is missing for the few cases where information about gender was not reported and inferences about gender could not be made.</p>
Format	<p>-1 = Item non-response 1 = Male 2 = Female</p> <p>The original survey variables provided below can be found in the file PPFAD. This algorithm omits individuals with survey non-responses.</p>
Algorithm	if SEX ne -1 then D11102LL = SEX

Variable Name	D11103\$\$
Variable Label	Race of Household Head
Unit of Observation	Individual
Description	Indicates the race of the interviewed head of household.
Method	<p>Race is <u>not</u> available in the SOEP.</p> <p>However, to separate Germans from non-Germans use the variables about</p> <ul style="list-style-type: none"> ○ nationality (NATION\$\$) which can be found in the \$PGEN-files or ○ the information about whether a person was born in Germany (GERMBORN) or ○ the country of origin (CORIGIN) whereas both can be found in the PPFAD-file.
Format	-1 = no information available

Variable Name	D11104\$\$
Variable Label	Marital Status of Individual
Unit of Observation	Individual
Description	This variable indicates the marital status in the current survey year of all individuals in the household 16 years of age and older.
Method	The married category represents individuals who are legally married and individuals who are living with a partner. All other categories represent the legal status of individuals who are not living with a partner. Married non-German "guest workers" whose spouses remained in their native countries are given a code of 6 or 7 depending on their ages.
Format	<p>-1 = N/A – Child / Item non-response 1 = Married, Living with a Partner 2 = Single, not Living with a Partner 3 = Widowed, not Living with a Partner 4 = Divorced, not Living with a Partner 5 = Separated (Legally Married), not Living with a Partner 6 = Not Living with a Partner (Individuals age 18 and older) 7 = Not Living with a Partner (Individuals under age 18)</p> <p>The original survey variables provided below can be found in the file _PGEN. This algorithm omits individuals with survey non-responses.</p> <p>Equivalent Data File Variable Definitions: D11101__ = Age of Individual</p>
Algorithm	<pre> if D11101\$\$ ge 16 then do if Yfamstd = 1 then D11104\$\$ = 1 else if Yfamstd = 2 then D11104\$\$ = 5 else if Yfamstd = 3 then D11104\$\$ = 2 else if Yfamstd = 4 then D11104\$\$ = 4 else if Yfamstd = 5 then D11104\$\$ = 3 else if Yfamstd = 6 and D11101\$\$ ge 18 then D11104\$\$ = 6 else if Yfamstd = 6 and D11101\$\$ lt 18 then D11104\$\$ = 7 end if D11101\$\$ lt 16 then D11104\$\$ = -1 </pre>

Variable Name	D11105\$\$
Variable Label	Relationship to Household Head
Unit of Observation	Individual
Description	This variable indicates the individual's relationship to the current survey year's head of household.
Method	The relation to head variable is created by collapsing the SOEP relationship to head variable into 5 categories. The original variable has 12 categories. These categories include spouses, life-partners, children, foster children, siblings, parents, in-laws, grandchildren, other relatives, and unrelated persons.
Format	<p>-1 = Item non-response 1 = Head 2 = Partner 3 = Child 4 = Relative 5 = Non-relative</p> <p>The original survey variables provided below can be found in the file _PBRUTTO. This algorithm omits individuals with survey non-responses.</p>

Variable Name	D11109\$\$
Variable Label	Number of Years of Education
Unit of Observation	Individual
Description	This variable indicates the number of years of education completed at the time survey for all individuals in the household 16 years of age and older.
Method	Individuals with a school leaving degree are assigned a minimum of between 9 and 12 years of education. Individuals with a vocational degree are assigned an additional 2 to 3.5 years of education. Individuals who attended a technical college are assigned an additional 4 years of education. If an individual received a vocational college degree or attended a university outside of the FRG then the individual is assigned a total of 18 or 19 years of education. For more information about the construction of this variable see Couch, 1994.
Format	-1 = N/A – Child / Item non-response The value of this variable ranges from 7 to 18. The original survey variables provided below can be found in the file _PGEN. This algorithm omits individuals with survey non-responses.
Algorithm	if Ybilzeit=.B then D11109\$\$=0; else D11109\$\$ = Ybilzeit; else D11109\$\$=-1;

Variable Name	D11112LL
Variable Label	Race of individual
Unit of Observation	Individual
Description	Indicates the race of each individual in the household.
Method	Race is <u>not</u> available in the SOEP.

Variable Name	E11101\$\$
Variable Label	Annual Work Hours of Individual
Unit of Observation	Individual
Description	This variable reports annual hours worked in the previous year for all individuals in the household 16 years of age and older.
Method	<p>There is no direct report of annual work hours in the SOEP. This variable was constructed using information on employment status in the survey year, average number of hours worked per week, and the number of months worked in the previous year (reported in the activity calendar).</p> <p>Annual hours worked in the previous year is calculated by adding together the estimated annual hours of full-time, part-time (including marginal employed), vocational training and short-time work. Annual hours of work in each of these four states is calculated by multiplying the average number of hours worked per week by the number of months worked in each of these three states for the previous year and by 4.33 (the average number of weeks per month). No correction for vacation or diseases has been made.</p> <p>When the state indicated in the employment status variable matches the state recorded in the monthly calendar file we use the reported average number of hours worked per week as our measure of weekly hours worked.</p> <p>When the state indicated in the employment status variable does <u>not</u> match the state recorded in the monthly calendar file we use an imputed weekly hours value as our measure of weekly hours worked. The imputed values are based on a regression of reported log average weekly work hours separately for full-time, part-time, marginal or irregular, short-time and currently not employed individuals. Covariates are age, age squared, sex, dummy variable for children in the household, marital status, region (east or west Germany) and two education dummy variables.</p> <p>There are still some cases where no annual work hours but individual labor income (I1110\$\$) can be observed. This finding can be explained by e.g. individuals who took maternity leave or did National Service.</p>
Format	<p>-1 = N/A - Child 0 = Not employed in the previous year The value of this variable ranges from 1 to 7457.</p> <p>The original survey variables provided below can be found in the file __P. This algorithm omits individuals with survey non-responses.</p> <p>Equivalent Data File Variable Definitions: D11101__ = Age of Individual</p>
Algorithm	<pre> if D11101\$\$ ge 16 then E11101\$\$=annual work hours imputation else E11101\$\$=0 </pre>

Variable Name	E11201\$\$
Variable Label	Annual Work Hours of Individual Imputed
Unit of Observation	Individual
Description	This variable indicates whether annual hours were imputed.
Method	This information is <u>not</u> available in the SOEP.

Variable Name	E11102\$\$
Variable Label	Employment Status of Individual
Unit of Observation	Individual
Description	This variable indicates employment status in the previous year for all individuals in the household 16 years of age and older.
Method	If the individual had positive wages in the previous year and worked at least 52 hours then the individual was employed. Otherwise, the individual was not employed.
Format	<p>-1 = N/A - Child 0 = Not Employed 1 = Employed</p> <p>This algorithm omits individuals with survey non-responses.</p> <p>Equivalent Data File Variable Definitions: D11101__ = Age of Individual E11101__ = Annual Work Hours of Individual I11110__ = Individual Labor Earnings</p>

Variable Name	E11104\$\$
Variable Label	Primary Activity of Individual
Unit of Observation	Individual
Description	This variable indicates primary activity at the time of the survey for all individuals in the household 16 years of age and older.
Method	<p>This variable is based on the individual's self-reported employment status at the time of the interview.</p> <p>If the individual reported being full-time, part-time, or marginally employed, having short-time work, performing military/civilian service, on maternity leave, or being engaged in in-company training then the individual is considered to be working now. If the individual reported not being employed or being unemployed then the individual is considered to be not working now.</p> <p>Unemployed is not a category in the recoded variable because in the original data individuals were able to choose unemployed as their employment status in 1984 through 1990 only.</p>
Format	<p>-1 = N/A – Child -2 = Item-non response 1 = Working Now 2 = Not Working Now</p> <p>The original survey variables provided below can be found in the file _P. This algorithm omits individuals with survey non-responses. Equivalent Data File Variable Definitions: D11101__ = Age of Individual</p>

Variable Names	H11112\$\$
Variable Label	Indicator – Wife / spouse is in Household
Unit of Observation	Household
Description	These variables indicate the presence of a “wife or spouse” in the household.
Method	These variables are simple indicator variables that a person who is a “wife/spouse” is present in a given year.
Format	0 = Not present 1 = Present The variables provided below can be found in the \$PEQUIV files. This algorithm omits individuals with survey non-responses.
Algorithm	if X11103\$\$=1 then do; H11112\$\$=0; if D11105\$\$=2 then H11112\$\$=1; end;

The following algorithms allow users to take Equivalent file variables and construct equivalence weights commonly used in various countries. To obtain equivalent household income, divide the equivalence scale weight into the household income variable. Here we present three typical example of equivalence weights:

Equivalence scale	OECD Equivalence Weights (referred to below as W11114\$\$)
Unit of Observation	Household
Description	Scale used by Organization for Economic Cooperation and Development (1982)
Method	Sets a single adult to be 1.0, each additional adult to be 0.7, and each child to be 0.5.
Algorithm	$W11114\$$(1.0+0.7*(D11106\$H11101\$-1)+0.5*H11101\$);$
----- ---	
Equivalence scale	Modified OECD Equivalence Weights (referred to below as W11115\$\$)
Unit of Observation	Household
Description	Scale used by Organization for Economic Cooperation and Development (1982), see also Hagenaars et al. (1994).
Method	Sets a single adult to be 1.0, each additional adult to be 0.5, and each child to be 0.3.
Algorithm	$W11115\$$(1.0+0.5*(D11106\$H11101\$-1)+0.3*H11101\$);$
----- ---	
Equivalence scale	Other Equivalence Weights (e.g. Square root of the Household size referred to below as W11116\$\$)
Unit of Observation	Household
Description	Household equivalence weight based upon a single international scale.
Method	The weight is based upon a scale developed in Buhmann et al. (1988). The scale is characterized by the following equation: $EI = D/S^e$ Where equivalent income (EI) equals total disposable household income (D) divided by household size (S) raised to the power (e). The parameter (e) represents the elasticity of the scale rate with respect to household size. Recent international studies on income inequality and poverty sponsored by the OECD (e.g., Forster 1990; Atkinson et al. 1994), and the Statistical Office of the European Commission (Hagenaars et al. 1994) and the Ruggles (1990) study of the United States use this type of exponential equivalence scale. We adopt a value of a equal to 0.5, which is most commonly used in international comparisons.
Algorithm	$W11116\$D11106\$^{0.5};$

Algorithm	$I11102\$ = I11103\$ + I11104\$ + I11106\$ + I11107\$ + I11108\$ + I11117\$ - I11109\$$

Variable Name	I11103\$\$
Variable Label	Household Labor Income
Unit of Observation	Household
Period	Annual
Description	This variable represents the combined labor income of all individuals in the household 16 years of age and older.
Method	<p>Labor earnings include wages and salary from all employment including training, primary and secondary jobs, and self-employment, plus income from bonuses, overtime, and profit-sharing.</p> <p>Specifically labor earnings is the sum of income from primary job, secondary job, self-employment, service pay, 13th month pay, 14th month pay, Christmas bonus pay, holiday bonus pay, miscellaneous bonus pay, and profit-sharing income. Since 2006 indemnity payments and commuting expenses or travel grants are also considered.</p>
Format	<p>The value of this variable ranges from 0 to 5.000.000.</p> <p>This variable is in current year EURO.</p> <p>This algorithm omits individuals with survey non-responses.</p> <p>Equivalent Data File Variable Definitions: I11110__ = Individual Labor Earnings</p>
Algorithm	I11103\$\$ = sum of I11110\$\$ over all individuals in the household

Variable Name	I11104\$\$
Variable Label	Household Asset Income
Unit of Observation	Household
Period	Annual
Description	This variable represents the household asset income reported by the head of the household.
Method	<p>Asset flows include income from interest, dividends, and rent.</p> <p>After 1984 respondents who could not estimate their interest and dividend income directly were asked to select a range from a set of categories. Their choices were:</p> <ul style="list-style-type: none"> under 500 DM 500 to 2,000 DM 2,000 to 5,000 DM 5,000 to 10,000 DM 10,000 DM and over <p>Starting in year 2001 (wave R) an additional item was offered:</p> <ul style="list-style-type: none"> 10,000 to 20,000 DM 20,000 DM and over <p>Since year 2002 (wave S) all items are asked for Euro:</p> <ul style="list-style-type: none"> under 250 Euro 250 to 1,000 Euro 1,000 to 2,500 Euro 2,500 to 5,000 Euro 5,000 to 10,000 Euro 10,000 Euro and over <p>These respondents are assigned an interest and dividend amount based on uniformly distributed random numbers within their income range.</p> <p>Rental income is the amount of income from rent minus any operation and maintenance costs.</p> <p>In 1991 income from rent and operation and maintenance costs were not asked. If the respondent was interviewed in 1990, 1991, and 1992 and reported having rental income or operation and maintenance costs for 1990 and 1992, the average of the 1990 and 1992 values are assigned to 1991. If the respondent was interviewed in only two of the years, one of the years being 1991, and reported having rental income or operation and maintenance costs, then rental income or operation and maintenance costs for that year are assigned to 1991.</p>
Format	<p>The value of this variable ranges from 0 to 5.000.000.</p> <p>This variable is in current year EURO.</p> <p>The survey variables provided below are part of the \$PEQUIV-file.</p> <p>This algorithm omits individuals with survey non-responses.</p>
Algorithm	$I11104\$ = (RENTY\$ - OPERY\$) + DIVDY\$$

Variable Name	I11105\$\$
Variable Label	Household Imputed Rental Value
Unit of Observation	Household
Period	Annual
Description	This variable represents the imputed rental value of owner occupied housing.
Method	<p>The Imputed Rent (IR) information calculated for the German SOEP data is based on the so called Opportunity Cost Approach. This approach at the micro level yields information equivalent to that given by the Market Value Approach used in National account statistics for determining IR. After generating a fictitious market rent for owner-occupiers, all owner related costs are deducted including operating and maintenance costs, interest payments on mortgages, as well as property taxes (see Yates 1994 / United Nations 1977).</p> <p>In more detail, the implementation of the opportunity cost approach is used here in the following way. Along the lines of Oaxaca (1973), we estimate an OLS (semilog) regression model of gross rent in terms of square meters (not including heating) actually paid by main tenants in privately financed housing (without social housing and households with reduced rent). Independent variables include indicators describing the condition of the house, the year of construction, size of dwelling, length of occupancy, community size and disposable income. Applying these regression coefficients to the population of owner occupiers <u>and</u> individuals living in households with reduced rent such as employer provided flats, social housing or rent-free households. The resulting estimate represents a gross value at market prices (without costs for heating and warm water). For owner-occupiers owner-specific costs for taxation, maintenance and operating costs as well as interest on mortgages were deducted yielding a net value which can be interpreted as the appropriate income advantage of owner-occupied housing. For rent-free households and persons living in households with below market rents no further deductions have to be made.</p> <p>Information on interest and mortgage payments for the previous year from homeowners in SOEP serves as the basis for determining the level of interest payments. We assume an annuity with constant payments based on 7% annual interest and a 1% principal over the course of an average period of 30 years. In addition, we assume that mortgage payments begin at the same time in which the household moves into its new home. Thus, in the beginning of the repayment period interest payments clearly exceed the mortgage repayment. As times goes by, the share of the mortgage paid off increases, leaving an increasing income advantage from IR. For example an average interest burden of 3.29 DM/m² per month is used for West Germany in 1988 and rises to 5.52 DM/m² per month in 1998. The average interest burden in East Germany was slightly lower, at 4.14 DM/m² per month in 1998.</p> <p>In case of owner related costs exceeding the income advantage (especially at the beginning of the mortgage repayment period), IR is assigned a value of zero.</p> <p>For further details see: Frick and Grabka (2001) and Frick and Grabka (2003):</p>
Format	<p>The value of this variable ranges from 0 to 5.000.000.</p> <p>This variable is in current year EURO.</p>
Algorithm	N/a

Variable Name	I11106\$\$
Variable Label	Household Private Transfers
Unit of Observation	Household
Period	Annual
Description	This variable represents the combined private transfers of all individuals in the household 16 years of age and older.
Method	Private transfers consists of income received from persons outside of the interviewed household. For waves A-Q this income was not specifically identified. Starting in wave R an additional question identifies alimony separately (variable \$p2o03 in SOEP file \$PKAL: \$ = R, S, ...). The bulk of transfer is likely to consist of alimony and child support payments.
Format	The value of this variable ranges from 0 to 5.000.000. This variable is in current year EURO. The survey variables provided below are part of the \$PEQUIV-file. This algorithm omits individuals with survey non-responses.
Algorithm	$I11106\$ = \text{sum of } (I11106\$ + I11106\$) \text{ over all individuals in the household}$

Variable Name	I11107\$\$
Variable Label	Household Public Transfers
Unit of Observation	Household
Period	Annual
Description	This variable represents the combined public transfers of all individuals in the household 16 years of age and older.
Method	<p>Public Transfers are the sum of individual public transfers -- student grants, maternity benefits, unemployment benefits, unemployment assistance, subsistence allowance and transition pay -- over all individuals in the household, plus household benefits -- housing allowances, child benefits, nursing care insurance, direct housing subsidy, subsistence assistance, support for special circumstances, social assistance for elderly and unemployment benefit II.</p> <p>In 1984 the amount of child benefits is not asked. Child benefits for this year were imputed using information on the number of children in the household and the number of months the benefits were received.</p> <p>In 1992 through 1994 the amounts of subsistence assistance and special circumstances benefits are not asked. These values have been filled in with imputed values for total social welfare income. In 1995 through 2000 amounts of subsistence assistance and special circumstances benefits are imputed using an algorithm developed by Peter Krause (DIW) based on the benefits received in the present survey month.</p> <p>Since 1996 nursing care insurance benefits are included in the sum. In 1996 German law established direct housing subsidy payments. Starting in the 2000 survey a separate question was asked about income from this source. Direct housing subsidy payments for respondents who bought homes between 1996 and 1999 were imputed using information about the year of construction, acquisition of ownership and number of children in the household. In 2005 social assistance for elderly was asked the first time. In 2006 unemployment benefit II was asked the first time instead of unemployment assistance</p>

Unit of Observation	Household	
Description	This variable represents the combined income after taxes and government transfers, the Total Household Taxes, the Household State Taxes and the Household Federal Taxes of all individuals in the household 16 years of age and older.	
Method	Income taxes and state taxes were not estimated for the SOEP using the National Bureau of Economic Research (NBER) TAXSIM Model. This variable is not available in the SOEP.	
Format	N/A	
Algorithm	N/a	

Variable Name	I11117\$\$
Variable Label	Household Private Retirement Income
Unit of Observation	Household
Period	Annual
Description	This variable represents the combined retirement income from private sources of all individuals in the household 16 years of age and older.
Method	Private pension income is the sum of supplementary civil servant pension income, company pensions, private pensions and pension income from “other” sources. See the algorithm for I11108\$\$.
Format	<p>The value of this variable ranges from 0 to 5.000.000. This variable is in current year EURO.</p> <p>The survey variables provided below are part of the \$PEQUIV-file. This algorithm omits individuals with survey non-responses. Note also that this information is not available in 1984 and 1985.</p>
Algorithm	
1984-1985:	N/a
2002-2003:	$I11117\$ = \text{sum of } (ICOMP\$ + IPRVP\$) \text{ over all individuals in the household}$ <p style="text-align: right;">(\$\$= 02-03)</p>
1986-2001, since 2004:	$I11117\$ = \text{sum of } (ivbl1\$ + ivbl2\$ + icom1\$ + icom2\$ + iprv1\$ + iprv2\$ + izon1\$ + izon2\$) \text{ over all individuals in the household}$ <p style="text-align: right;">(\$\$= 86-01, 04, ...)</p>

Variable Name	I11118\$\$
Variable Label	Household Windfall Income
Unit of Observation	Household
Period	Annual
Description	This variable represents the amount of total household windfall income of all individuals in the household 16 years of age and older.
Method	Windfall income consists of one-time transfers, winnings, inheritance and gifts of money or items worth more than 5000 DM (wave Q-R), 2500 Euro (wave S-U) or 500 Euro (wave V-X). It was asked the first time in wave Q (variable qh4505 in SOEP file QH).
Format	The value of this variable ranges from 0 to 5.000.000. This variable is in current year EURO.
Algorithm	<p>This algorithm omits individuals with survey non-responses. The original survey variables provided below can be found in the file _H.</p> <p>I11118\$\$ = Ywind</p> <p>Windfall income variable list by survey year - each entry denoted in algorithm as Ywind: QH4505 RH4505 SH4505 TH44 UH44 VH47 WH47 XH47</p>

Variable Name	I11201\$\$
Variable Label	Impute Household Pre-Government Income
Unit of Observation	Household
Description	<p>This variable indicates the percentage share of income that has been imputed for Household Pre-Government Income (I11101\$).</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
Method	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> -1 = no answer or do not know -2 = does not apply -3 = original value was deleted because it was found to be implausible <p>The imputation procedures was used to fill in missing values represented by -1 and -3 only.</p>
Format	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>
Algorithm	I11201\$\$= percentage share of income that has been imputed for I11101\$

Variable Name	I11202\$\$
Variable Label	Impute Household Post-Government Income
Unit of Observation	Household
Description	<p>This variable indicates the percentage share of income that has been imputed for household post-government income (I11102\$\$).</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
Method	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> -1 = no answer or do not know -2 = does not apply -3 = original value was deleted because it was found to be implausible <p>The imputation procedures was used to fill in missing values represented by -1 and -3 only.</p>
Format	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>
Algorithm	I11202\$\$= percentage share of income that has been imputed for I11102\$\$

Variable Name	I11203\$\$
Variable Label	Impute Household Labor Income
Unit of Observation	Household
Description	<p>This variable indicates the percentage share of income that has been imputed for household labor income (I11103\$\$).</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
Method	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> -1 = no answer or do not know -2 = does not apply -3 = original value was deleted because it was found to be implausible <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
Format	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>
Algorithm	I11203\$\$= percentage share of income that has been imputed for I11103\$\$

Variable Name	I11204\$\$
Variable Label	Impute Household Asset Income
Unit of Observation	Household
Description	<p>This variable indicates the percentage share of income that has been imputed for household asset income (I11104\$\$).</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
Method	<p>In the original SOEP data there are three types of missing values. Variable Name	NURSH\$\$
Variable Label	Nursing allowances
Unit of Observation	Household
Period	Annual
Description	This variable represents the household income from nursing allowances. Nursing allowances was introduced in the German welfare system in 1996. In 1996-2000 questions related to this topic were only asked for the month of the interview but not for the previous year. Housing allowances for the previous year was imputed using this information. Since 2001 both the numbers of that benefit was claimed in the previous year and the average amount per month were asked.
Method	Nursing allowances is the product of the number of months that benefit was claimed in the previous year and the average amount per month.
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO. The original survey variables provided below can be found in the file _H. This algorithm omits individuals with survey non-responses.

Variable Name	SUBST\$\$
Variable Label	Social assistance
Unit of Observation	Household
Period	Annual
Description	This variable represents the household income from social assistance in the last year.
Method	Social assistance is the product of the number of months that benefit was claimed in the previous year and the average amount per month. In 1992 through 1994 the amounts of subsistence assistance and special circumstances benefits were not asked. These values have been filled in with imputed values for total social welfare income. In 1995 through 2000 amounts of subsistence assistance <u>and</u> special circumstances benefits are imputed using an algorithm developed by Peter Krause (DIW) based on the benefits received in the present survey month.
Format	The value of this variable ranges from 0 to 99.999. This variable is in current year EURO. The original survey variables provided below can be found in the file _H. This algorithm omits individuals with survey non-responses.

Variable Label	Impute Interest, dividend income
Unit of Observation	Household
Description	<p>This variable indicates if income from interest or dividends (DIVDY\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
Method	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> -1 = no answer or do not know -2 = does not apply -3 = original value was deleted because it was found to be implausible <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
Format	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

Variable Name	FCHSPT\$\$
Variable Label	Impute Child allowance
Unit of Observation	Household
Description	<p>This variable indicates if income from child allowances (CHSPT\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
Method	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> -1 = no answer or do not know -2 = does not apply -3 = original value was deleted because it was found to be implausible <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
Format	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

Variable Name	FHOUSE\$\$
Variable Label	Impute Housing benefit
Unit of Observation	Household
Description	<p>This variable indicates if income from housing benefit (HOUSE\$\$) has been imputed. The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
Method	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> -1 = no answer or do not know -2 = does not apply -3 = original value was deleted because it was found to be implausible <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
Format	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

Variable Name	FNURSH\$\$
Variable Label	Impute Nursing allowances
Unit of Observation	Household
Description	<p>This variable indicates if income from nursing allowances (NURSH\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
Method	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> -1 = no answer or do not know -2 = does not apply -3 = original value was deleted because it was found to be implausible <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
Format	<p>0 = Not Imputed</p> <p>1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

Variable Name	FSUBST\$\$
Variable Label	Impute Social assistance
Unit of Observation	Household
Description	<p>This variable indicates if income from social assistance (SUBST\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
Method	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> -1 = no answer or do not know -2 = does not apply -3 = original value was deleted because it was found to be implausible <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
Format	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

Variable Name	FSPHLP\$\$
Variable Label	Impute Social assistance for special circumstances
Unit of Observation	Household
Description	<p>This variable indicates if income from social assistance for special circumstances (SPHLP\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
Method	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> -1 = no answer or do not know -2 = does not apply -3 = original value was deleted because it was found to be implausible <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
Format	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

Variable Name	FSSOLD\$
Variable Label	Impute Social assistance for elderly
Unit of Observation	Household
Description	<p>This variable indicates if income from social assistance for elderly (SSOLD\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
Method	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> -1 = no answer or do not know -2 = does not apply -3 = original value was deleted because it was found to be implausible <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
Format	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

Variable Name	FALG2\$\$
Variable Label	Imputation flag: Unemployment benefit II
Unit of Observation	Household
Description	<p>This variable indicates if income from unemployment benefit II (ALG2\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
Method	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> -1 = no answer or do not know -2 = does not apply -3 = original value was deleted because it was found to be implausible <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
Format	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

Variable Name	FHSUP\$\$
Variable Label	Impute Housing support for owner-occupiers
Unit of Observation	Household
Description	<p>This variable indicates if income from housing support for owner-occupiers (HSUP\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
Method	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> -1 = no answer or do not know -2 = does not apply -3 = original value was deleted because it was found to be implausible <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
Format	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

Variable Name	FLOSSR\$
Variable Label	Impute Losses from renting and leasing
Unit of Observation	Household
Description	<p>This variable indicates if losses from renting and leasing (LOSSR\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
Method	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> -1 = no answer or do not know -2 = does not apply -3 = original value was deleted because it was found to be implausible <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
Format	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

Variable Name	FLOSSC\$
Variable Label	Impute Losses from capital investment
Unit of Observation	Household
Description	<p>This variable indicates if losses from capital investment (LOSSC\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
Method	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> -1 = no answer or do not know -2 = does not apply -3 = original value was deleted because it was found to be implausible <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
Format	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

Variable Name	IJOB1\$\$
Variable Label	Wages, Salary from main job
Unit of Observation	Individual
Period	Annual
Description	This variable represents wages or salary from main job of individuals in the household 16 years of age and older.
Method	Wages or salary from main job is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO. The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.
Algorithm	$IJOB1\$ = (\$P2A02 * \$P2A03)$

Variable Name	IJOB2\$\$
Variable Label	Income from secondary employment
Unit of Observation	Individual
Period	Annual
Description	This variable represents income from secondary employment of individuals in the household 16 years of age and older.
Method	Income from secondary employment is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO. The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.
Algorithm	$IJOB2\$ = (\$P2C02 * \$P2C03)$

Variable Name	ISELF\$\$
Variable Label	Income from self-employment
Unit of Observation	Individual
Period	Annual
Description	This variable represents income from self-employment of individuals in the household 16 years of age and older.
Method	Income from self-employment is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO. The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.
Algorithm	$\text{ISELF}\$ = (\$P2B02 * \$P2B03)$

Variable Name	IOLDY\$\$
Variable Label	Combined old-age, disability and civil servants pensions
Unit of Observation	Individual
Period	Annual
Description	<p>This variable represents income from combined old-age, disability and civil servants pensions of individuals in the household 16 years of age and older.</p> <p>In 2002 and 2003 separate questions regarding income from private or company pension were asked. Thus these incomes components are not included in old-age, disability and civil servants pensions in the those years.</p>
Method	<p>Income from combined old-age, disability and civil servants pensions is the product of the number of months that income was received in the previous year and the average amount per month.</p> <p>If the information about the number of months is missing, the sample mean of that variable has been assigned.</p>
Format	<p>The value of this variable ranges from 0 to 999.999.</p> <p>This variable is in current year EURO.</p> <p>The original survey variables provided below can be found in the file _PKAL.</p> <p>This algorithm omits individuals with survey non-responses.</p>
Algorithm	$\text{IOLDY}\$ = (\text{\$P2D02} * \text{\$P2D03})$

Variable Name	IWIDY\$\$
Variable Label	Combined widows and orphans pension
Unit of Observation	Individual
Period	Annual
Description	<p>This variable represents income from combined widows and orphans pension of individuals in the household 16 years of age and older.</p> <p>In 2002 and 2003 separate questions regarding income from private or company pension were asked. Thus these incomes components are not included in widows and orphans pension in the those years.</p>
Method	<p>Income from combined widows and orphans pension is the product of the number of months that income was received in the previous year and the average amount per month.</p> <p>If the information about the number of months is missing, the sample mean of that variable has been assigned.</p>
Format	<p>The value of this variable ranges from 0 to 999.999.</p> <p>This variable is in current year EURO.</p> <p>The original survey variables provided below can be found in the file _PKAL.</p> <p>This algorithm omits individuals with survey non-responses.</p>
Algorithm	$\text{IWIDY}\$ = (\$P2E02 * \$P2E03)$

Variable Name	ICOMP\$\$
Variable Label	Combined company pension (surviving dependants c.p.)
Unit of Observation	Individual
Period	Annual
Description	This variable represents income from combined company pension of individuals in the household 16 years of age and older. In 1984-2001 and since 2004 specific questions related to this topic were not asked. Thus these income component is included in old-age, disability and civil servants pensions (IOLDY\$\$) in the those years.
Method	Income from combined company pension is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO. The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.
Algorithm	1984-2001: N/a 2002-2003: $ICOMP\$ = (\$P2P02 * \$P2P03)$ (\$\$=02 – 03, \$ = S-T) since 2004: N/a

Variable Name	IPRVP\$\$
Variable Label	Combined private pension (old-age, accident, disability)
Unit of Observation	Individual
Period	Annual
Description	This variable represents income from combined private pension of individuals in the household 16 years of age and older. In 1984-2001 and since 2004 specific questions related to this topic were not asked. Thus these income component is included in old-age, disability and civil servants pensions (IOLDY\$\$) in the those years.
Method	Income from combined private pension is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO. The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.
Algorithm	1984-2001: N/a 2002-2003: $IPRVP\$ = (\$P2Q02 * \$P2Q03)$ ($\$ = 02 - 03, \$ = S-T$) since 2004: N/a

Variable Name	IUNBY\$\$
Variable Label	Unemployment benefit
Unit of Observation	Individual
Period	Annual
Description	This variable represents income from unemployment benefit of individuals in the household 16 years of age and older.
Method	Income from unemployment benefit is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO. The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.
Algorithm	$IUNBY\$ = (\$P2F02 * \$P2F03)$

Variable Name	IUNAY\$\$
Variable Label	Unemployment assistance
Unit of Observation	Individual
Period	Annual
Description	This variable represents income from unemployment assistance of individuals in the household 16 years of age and older. In 2006 this information is no longer relevant, given that unemployment assistance has been replaced by unemployment benefit II (ALG2\$\$)
Method	Income from unemployment assistance is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO. The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.
Algorithm	1984-2005: IUNAY\$\$ = (\$P2G02 * \$P2G03) since 2006: N/a

Variable Name	ISUBY\$\$
Variable Label	Subsistence allowance
Unit of Observation	Individual
Period	Annual
Description	This variable represents income from subsistence allowance of individuals in the household 16 years of age and older.
Method	Income from subsistence allowance is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO. The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.
Algorithm	$ISUBY\$ = (\$P2H02 * \$P2H03)$

Variable Name	IERET\$\$
Variable Label	Old-age transition benefit
Unit of Observation	Individual
Period	Annual
Description	This variable represents income from old-age transition benefit of individuals in the household 16 years of age and older. In 1984-1995 and since 2002 questions related to this topic were not asked.
Method	Income from old-age transition benefit is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO. The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.
Algorithm	1984-1995: N/a 1996-2001: $IERET\$ = (\$P2I02 * \$P2I03)$ $(\$ = 96 - 01, \$ = M, N, \dots, R)$ since 2002: N/a

Variable Name	IMATY\$\$
Variable Label	Maternity benefit
Unit of Observation	Individual
Period	Annual
Description	This variable represents income from maternity benefit of individuals in the household 16 years of age and older.
Method	Income from maternity benefit is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO. The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.
Algorithm	$IMATY\$\$ = (\$P2J02 * \$P2J03)$

Variable Name	ISTUY\$\$
Variable Label	Student grants
Unit of Observation	Individual
Period	Annual
Description	This variable represents income from student grants of individuals in the household 16 years of age and older.
Method	Income from student grants is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO. The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.
Algorithm	$\text{ISTUY}\$ = (\$P2K02 * \$P2K03)$

Variable Name	IMILT\$\$
Variable Label	Military community service pay
Unit of Observation	Individual
Period	Annual
Description	This variable represents income from military community service pay of individuals in the household 16 years of age and older. In 1984-1995 questions related to this topic were not asked.
Method	Income from military community service pay is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO. The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.
Algorithm	1984-1995: N/a since 1996: $IMILT\$ = (\$P2L02 * \$P2L03)$

Variable Name	IALIM\$\$
Variable Label	Alimony
Unit of Observation	Individual
Period	Annual
Description	This variable represents income from alimony of individuals in the household 16 years of age and older. In 1984-2000 specific questions related to this topic were not asked. Alimony is included in private transfers received (IELSE\$\$) in the those years.
Method	Income from alimony is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO. The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.
Algorithm	1984-2000: N/a since 2001: $IALIM\$ = (\$P2O02 * \$P2O03)$

Variable Name	IELSE\$\$
Variable Label	Private Transfers received
Unit of Observation	Individual
Period	Annual
Description	This variable represents income from private transfers of individuals in the household 16 years of age and older. In 1984-2000 alimony is included in private transfers. Since 2001 a specific question regarding alimony (IALIM\$\$) were asked, thus alimony is no longer included in private transfers received.
Method	Income from private transfers is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO. The original survey variables provided below can be found in the file _PKAL. This algorithm omits individuals with survey non-responses.
Algorithm	$IELSE\$ = (\$P2M02 * \$P2M03)$

Variable Name	I13LY\$\$
Variable Label	13th monthly salary
Unit of Observation	Individual
Period	Annual
Description	This variable represents income from 13th monthly salary of individuals in the household 16 years of age and older.
Method	Transcribed variable.
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.
	The original survey variables provided below can be found in the file _P. This algorithm omits individuals with survey non-responses.
Algorithm	I13LY\$\$ = Y13 13th monthly salary variable list by survey year - each entry denoted in algorithm as Y13: ap3902 bp5902 cp5902 dp5902 ep5402 fp7202 gp7202 hp6702 ip6702 jp7702 kp7702 lp8202 mp6802 np6802 op5902 pp7702 qp7702 rp7702 sp7702 tp9502 up8002 vp10102 wp7802 xp9502

Variable Name	I14LY\$\$
Variable Label	14th monthly salary
Unit of Observation	Individual
Period	Annual
Description	This variable represents income from 14th monthly salary of individuals in the household 16 years of age and older.
Method	Transcribed variable.
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.
	The original survey variables provided below can be found in the file _P. This algorithm omits individuals with survey non-responses.
Algorithm	I14LY\$\$ = Y14 14th monthly salary variable list by survey year - each entry denoted in algorithm as Y14: ap3904 bp5904 cp5904 dp5904 ep5404 fp7204 gp7204 hp6704 ip6704 jp7704 kp7704 lp8204 mp6804 np6804 op5904 pp7704 qp7704 rp7704 sp7704 tp9504 up8004 vp10104 wp7804 xp9504

Variable Name	IXMAS\$\$
Variable Label	Christmas bonus
Unit of Observation	Individual
Period	Annual
Description	This variable represents income from Christmas bonus of individuals in the household 16 years of age and older.
Method	Transcribed variable.
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.
	The original survey variables provided below can be found in the file _P. This algorithm omits individuals with survey non-responses.
Algorithm	IXMAS\$\$ = YXMS Christmas bonus variable list by survey year - each entry denoted in algorithm as YXMS: ap3906 bp5906 cp5906 dp5906 ep5406 fp7206 gp7206 hp6706 ip6706 jp7706 kp7706 lp8206 mp6806 np6806 op5906 pp7706 qp7706 rp7706 sp7706 tp9506 up8006 vp10106 wp7806 xp9506

Variable Name	IHOLY\$\$
Variable Label	Vacation bonus
Unit of Observation	Individual
Period	Annual
Description	This variable represents income from vacation bonus of individuals in the household 16 years of age and older.
Method	Transcribed variable.
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.
	The original survey variables provided below can be found in the file _P. This algorithm omits individuals with survey non-responses.
Algorithm	<p>IHOLY\$\$ = YHOL</p> <p>Vacation bonus variable list by survey year - each entry denoted in algorithm as YHOL:</p> <p>ap3908 bp5908 cp5908 dp5908 ep5408 fp7208 gp7208 hp6708 ip6708 jp7708 kp7708 lp8208 mp6808 np6808 op5908 pp7708 qp7708 rp7708 sp7708 tp9508 up8008 vp10108 wp7808 xp9508</p>

Variable Name	IGRAY\$\$
Variable Label	Profit-sharing
Unit of Observation	Individual
Period	Annual
Description	This variable represents income from profit sharing of individuals in the household 16 years of age and older.
Method	Transcribed variable.
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.
	The original survey variables provided below can be found in the file _P. This algorithm omits individuals with survey non-responses.
Algorithm	IGRAY\$\$ = YGRY Profit sharing variable list by survey year - each entry denoted in algorithm as YGRY: ap3910 bp5910 cp5910 dp5910 ep5410 fp7210 gp7210 hp6710 ip6710 jp7710 kp7710 lp8210 mp6810 np6810 op5910 pp7710 qp7710 rp7710 sp7710 tp9510 up8010 vp10110 wp7810 xp9510

Variable Name	IOTHY\$\$
Variable Label	Other bonuses
Unit of Observation	Individual
Period	Annual
Description	This variable represents income from other bonuses of individuals in the household 16 years of age and older. In 1984 questions related to this topic were not asked. They are included in income from profit sharing (IGRAY84).
Method	Transcribed variable.
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.
	The original survey variables provided below can be found in the file _P. This algorithm omits individuals with survey non-responses.
Algorithm	1984: N/a since 1985: IOTHY\$\$ Other bonuses variable list by survey year: bp5912 cp5912 dp5912 ep5412 fp7212 gp7212 hp6712 ip6712 jp7712 kp7712 lp8212 mp6812 np6812 op5912 pp7712 qp7712 rp7712 sp7712 tp9512 up8012 vp10112 wp7812 xp9512

Variable Name	ITRAY\$\$
Variable Label	Commuting expenses, travel grant
Unit of Observation	Individual
Period	Annual
Description	This variable represents income from commuting expenses or travel grants provided by the employer of individuals in the household 16 years of age and older. In 1984-2005 specific questions related to this topic were not asked.
Method	Transcribed variable.
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.
Algorithm	The original survey variables provided below can be found in the file _P. This algorithm omits individuals with survey non-responses. 1984-2005: N/a since 2006: ITRAY\$\$ Commuting or travel grants variable list by survey year: wp7902 xp9602

Variable Name	IDEMY\$\$
Variable Label	Indemnity payments
Unit of Observation	Individual
Period	Annual
Description	This variable represents income from indemnity payments of individuals in the household 16 years of age and older. In 1984-2005 specific questions related to this topic were not asked.
Method	Transcribed variable.
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO.
Algorithm	The original survey variables provided below can be found in the file _P. This algorithm omits individuals with survey non-responses. 1984-2005: N/a since 2006: IDEMY\$\$ Indemnity payments variable list by survey year: wp8502 xp9102

Variable Name	IGRV1\$\$
Variable Label	Statutory pension insurance
Unit of Observation	Individual
Period	Annual
Description	This variable represents income from statutory pension insurance of individuals in the household 16 years of age and older. In 1984-1985 specific questions related to this topic were not asked. Since 2002 the statutory pension insurance did also include the social miners insurance pension (ISMP1\$\$) and farmers pension (IAGR1\$).
Method	Income from statutory pension insurance is the product of the number of months that income was received in the previous year and the average amount per month. If the information about the number of months is missing, the sample mean of that variable has been assigned.
Format	The value of this variable ranges from 0 to 999.999. This variable is in current year EURO. The original survey variables provided below can be found in the file _P and _PKAL. This algorithm omits individuals with survey non-responses.

Variable Name	FJOB1\$\$
Variable Label	Imputation flag: Wages, Salary from main job
Unit of Observation	Individual
Description	<p>This variable indicates if income from wages or salary from main job (IJOB1\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
Method	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> -1 = no answer or do not know -2 = does not apply -3 = original value was deleted because it was found to be implausible <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
Format	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

Variable Name	FJOB2\$\$
Variable Label	Imputation flag: Income from secondary job
Unit of Observation	Individual
Description	<p>This variable indicates if income from secondary job (IJOB2\$\$) has been imputed. The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
Method	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> -1 = no answer or do not know -2 = does not apply -3 = original value was deleted because it was found to be implausible <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
Format	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

Variable Name	FSELF\$\$
Variable Label	Imputation flag: Income from self-employment
Unit of Observation	Individual
Description	<p>This variable indicates if income from self-employment (ISELF\$\$) has been imputed. The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
Method	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> -1 = no answer or do not know -2 = does not apply -3 = original value was deleted because it was found to be implausible <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
Format	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

Variable Name	FOLDY\$\$
Variable Label	Imputation flag: combined old-age, civil servants pensions.
Unit of Observation	Individual
Description	<p>This variable indicates if income from combined old-age, civil servants pensions (IOLDY\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
Method	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> -1 = no answer or do not know -2 = does not apply -3 = original value was deleted because it was found to be implausible <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
Format	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

Variable Name	FWIDY\$\$
Variable Label	Imputation flag: combined widows / orphans pension
Unit of Observation	Individual
Description	<p>This variable indicates if income from combined widows or orphans pension (IWIDY\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
Method	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> -1 = no answer or do not know -2 = does not apply -3 = original value was deleted because it was found to be implausible <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
Format	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

Variable Name	FCOMP\$\$
Variable Label	Imputation flag: Combined company pension
Unit of Observation	Individual
Description	<p>This variable indicates if income from combined company pension (ICOMP\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
Method	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> -1 = no answer or do not know -2 = does not apply -3 = original value was deleted because it was found to be implausible <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
Format	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

Variable Name	FPRVP\$\$
Variable Label	Imputation flag: Combined private pension
Unit of Observation	Individual
Description	<p>This variable indicates if income from combined private pension (IPRVP\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
Method	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> -1 = no answer or do not know -2 = does not apply -3 = original value was deleted because it was found to be implausible <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
Format	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

Variable Name	FUNBY\$\$
Variable Label	Imputation flag: Unemployment benefit
Unit of Observation	Individual
Description	<p>This variable indicates if income from unemployment benefit (IUNBY\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
Method	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> -1 = no answer or do not know -2 = does not apply -3 = original value was deleted because it was found to be implausible <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
Format	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

Variable Name	FUNAY\$\$
Variable Label	Imputation flag: Unemployment assistance
Unit of Observation	Individual
Description	<p>This variable indicates if income from unemployment assistance (IUNAY\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
Method	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> -1 = no answer or do not know -2 = does not apply -3 = original value was deleted because it was found to be implausible <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
Format	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

Variable Name	FSUBY\$\$
Variable Label	Imputation flag: Subsistence allowance
Unit of Observation	Individual
Description	<p>This variable indicates if income from subsistence allowance (ISUBY\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
Method	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> -1 = no answer or do not know -2 = does not apply -3 = original value was deleted because it was found to be implausible <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
Format	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

Variable Name	FERET\$\$
Variable Label	Imputation flag: Old-age transition benefit
Unit of Observation	Individual
Description	<p>This variable indicates if income from old-age transition benefit (IERET\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
Method	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> -1 = no answer or do not know -2 = does not apply -3 = original value was deleted because it was found to be implausible <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
Format	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

Variable Name	FMATY\$\$
Variable Label	Imputation flag: Maternity benefit
Unit of Observation	Individual
Description	<p>This variable indicates if income from maternity benefit (HSUP\$\$) has been imputed. The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
Method	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> -1 = no answer or do not know -2 = does not apply -3 = original value was deleted because it was found to be implausible <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
Format	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

Variable Name	FSTUY\$\$
Variable Label	Imputation flag: Student grants
Unit of Observation	Individual
Description	<p>This variable indicates if income from student grants (ISTUY\$\$) has been imputed. The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
Method	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> -1 = no answer or do not know -2 = does not apply -3 = original value was deleted because it was found to be implausible <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
Format	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

Variable Name	FMILT\$\$
Variable Label	Imputation flag: Military / community service pay
Unit of Observation	Individual
Description	<p>This variable indicates if income from military or community service pay (IMILT\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
Method	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> -1 = no answer or do not know -2 = does not apply -3 = original value was deleted because it was found to be implausible <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
Format	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

Variable Name	FALIM\$\$
Variable Label	Imputation flag: Alimony
Unit of Observation	Individual
Description	<p>This variable indicates if income from alimony (IALIM\$\$) has been imputed. The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
Method	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> -1 = no answer or do not know -2 = does not apply -3 = original value was deleted because it was found to be implausible <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
Format	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

Variable Name	FELSE\$\$
Variable Label	Imputation flag: Private Transfers received
Unit of Observation	Individual
Description	<p>This variable indicates if income from private transfers received (IELSE\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
Method	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> -1 = no answer or do not know -2 = does not apply -3 = original value was deleted because it was found to be implausible <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
Format	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

Variable Name	F13LY\$\$
Variable Label	Imputation flag: 13th monthly salary
Unit of Observation	Individual
Description	<p>This variable indicates if income from 13th monthly salary (I13LY\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
Method	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> -1 = no answer or do not know -2 = does not apply -3 = original value was deleted because it was found to be implausible <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
Format	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

Variable Name	F14LY\$\$
Variable Label	Imputation flag: 14th monthly salary
Unit of Observation	Individual
Description	<p>This variable indicates if income from 14th monthly salary (I14LY\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
Method	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> -1 = no answer or do not know -2 = does not apply -3 = original value was deleted because it was found to be implausible <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
Format	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

Variable Name	FXMAS\$\$
Variable Label	Imputation flag: Christmas bonus
Unit of Observation	Individual
Description	<p>This variable indicates if income from Christmas bonus (IXMAS\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
Method	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> -1 = no answer or do not know -2 = does not apply -3 = original value was deleted because it was found to be implausible <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
Format	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

Variable Name	FHOLY\$\$
Variable Label	Imputation flag: Vacation bonus
Unit of Observation	Individual
Description	<p>This variable indicates if income from Vacation bonus (IHOLY\$\$) has been imputed. The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
Method	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> -1 = no answer or do not know -2 = does not apply -3 = original value was deleted because it was found to be implausible <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
Format	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

Variable Name	FGRAY\$\$
Variable Label	Imputation flag: Profit-sharing / Gratifications
Unit of Observation	Individual
Description	<p>This variable indicates if income from profit-sharing (IGRAY\$\$) has been imputed. The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
Method	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> -1 = no answer or do not know -2 = does not apply -3 = original value was deleted because it was found to be implausible <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
Format	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

Variable Name	FOTHY\$\$
Variable Label	Imputation flag: Other bonuses
Unit of Observation	Individual
Description	<p>This variable indicates if income from other bonuses (IOTHY\$\$) has been imputed. The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
Method	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> -1 = no answer or do not know -2 = does not apply -3 = original value was deleted because it was found to be implausible <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
Format	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

Variable Name	FTRAY\$\$
Variable Label	Imputation flag: Commuting expenses, travel grant
Unit of Observation	Individual
Description	<p>This variable indicates if income from commuting expenses or travel grants (ITRAY\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
Method	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> -1 = no answer or do not know -2 = does not apply -3 = original value was deleted because it was found to be implausible <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
Format	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

Variable Name	FDEMY\$\$
Variable Label	Imputation flag: Indemnity payments
Unit of Observation	Individual
Description	<p>This variable indicates if income from indemnity payments (IDEMY\$\$) has been imputed.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
Method	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> -1 = no answer or do not know -2 = does not apply -3 = original value was deleted because it was found to be implausible <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
Format	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

Variable Name	FGRV1\$\$
Variable Label	Imputation flag: statutory pension insurance
Unit of Observation	Individual
Description	<p>This variable indicates if income from statutory pension insurance (IGRV1\$\$) has been imputed. In order to reduce complexity and because of minor incidence, the imputation flag variable FGVR1 encompasses also imputation of item-non-response on any of the considered variables related to (own) pension income.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
Method	<p>In the original SOEP data there are three types of missing values. These missing values can be interpreted as:</p> <ul style="list-style-type: none"> -1 = no answer or do not know -2 = does not apply -3 = original value was deleted because it was found to be implausible <p>The imputation procedures was used to fill in missing values represented by -1 (.A) and -3 (.C) only.</p>
Format	<p>0 = Not Imputed 1 = Fully Imputed</p> <p>This algorithm omits individuals with survey non-responses.</p>

Variable Name	FGRV2\$\$
Variable Label	Imputation flag: widows or orphans statutory pension insurance
Unit of Observation	Individual
Description	<p>This variable indicates if income from widows or orphans statutory pension insurance (IGRV2\$\$) has been imputed. In order to reduce complexity and because of minor incidence, the imputation flag variable FGVR2 encompasses also imputation of item-non-response on any of the considered variables related to Widows and orphans pension income.</p> <p>The predominant imputation technique used to fill in missing values is based on the row and column imputation procedure developed by Little and Su (1989). In the case of lacking longitudinal data purely cross-sectional imputation techniques are applied. For further details, see: Grabka and Frick (2003).</p>
Method	<p>In the original SOEP data there are three types of missing values. Variable Name	W11101\$\$
Variable Label	Individual Weight
Unit of Observation	Individual
Description	Indicates the individual's population and sample weight. The individual weight provides a time-series consistent information, which might be used for analyses of income and income inequality over time. Given the selectivity built in the answering behavior of first-time respondents with respect to income questions (showing a significant higher share of item-non response which is especially true for a first wave of a new sub-sample), this weighting factor excludes every first wave of a new sub-sample of the SOEP. If all sub-samples will be used, the appropriate variable is W11105\$\$.
Method	Individual weights to compensate for unequal probabilities of selection and sample attrition are necessary to obtain populations based statistics. The individual weights also encompass population weights.
Format	<p>The value of this variable ranges from 0 to 80.000.</p> <p>The original survey variables provided below can be found in the file PHRF. This algorithm omits individuals with survey non-responses.</p>
Algorithm	W11101\$\$ = Yphrf1

Variable Name	W11102\$\$
Variable Label	Household Weight
Unit of Observation	Household
Description	Indicates the household's sample weight.
Method	Household weights to compensate for unequal probabilities of selection and sample attrition are necessary to obtain populations based statistics.
Format	The value of this variable ranges from 0 to 80.000. The original survey variables provided below can be found in the file HHRF. This algorithm omits individuals with survey non-responses.
Algorithm	W11102\$\$ = Yhhrf1

Variable Name	W11103\$\$
Variable Label	Longitudinal Weight
Unit of Observation	Individual
Description	Indicates the individual's longitudinal sample weight.
Method	<p>Longitudinal weights in the SOEP are constructed using inverse staying factors. The staying factor is the inverse of the probability that an individual participated in the named year. By themselves, W11103\$\$ are only staying factors.</p> <p>To properly weight a balanced sample of individuals represented in five years of the survey (1986 through 1990), for example, create a longitudinal weight by multiplying the individual weight in 1986 by the staying factors in 1987, 1988, 1989, and 1990.</p> <p>Example: longitudinal weight = W1110186*W1110387*W1110388*W1110389*W1110390</p> <p>The created longitudinal weight should be used with any longitudinal sample.</p>
Format	<p>N/A</p> <p>The original survey variables provided below can be found in the file PHRF. This algorithm omits individuals with survey non-responses.</p>
